Floors that don't have a handicap

Reactive resin coatings from Silikal can take a good work-out

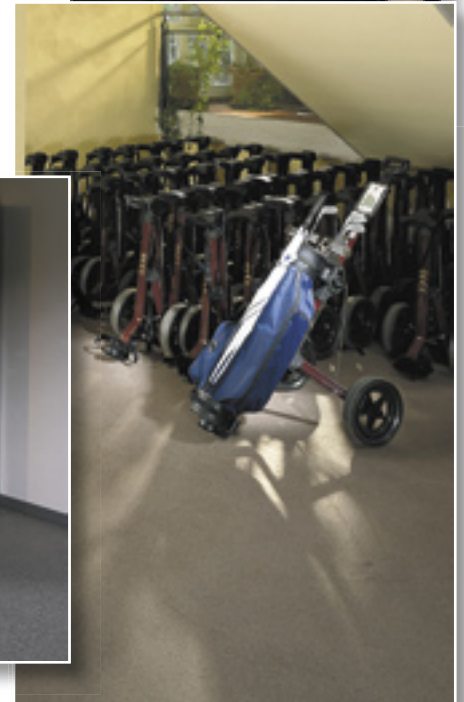

The spikes on golf shoes are, in the true sense of the word, a prickly affair when worn inside. The same can be said of golf clubs that come crashing down or the wheels on a trolley when it is pulled across the clubhouse floor. All of the above cause extreme stress for floors in buildings at golf courses, problems that were mastered with ease at the exclusive "Gut Henriettenthal" Golf Club in Idstein-Wörsdorf, 35 km north of Frankfurt, Germany, where floors made of Silikal reactive resins can stand up to whatever the sports world can drive, chip or putt at them.

The locker rooms and showers, the trolley parking place upstairs, toilets and also the club's kitchen and canteen, all in all

around 650 m² were coated in a light grey Silikal resin with a 10 % addition each of red and black quartz sand. The almost eight millimetre thick floor was shaped into a basin thus offering fully moisture-proof coating. Further advantages the floor has shown in daily use include its anti-skid properties and its easy cleaning in all the areas it was applied.

Silikal systems also go down easily. It took a specialist applicator only three-and-a-half days to apply the entire surface. Floor areas with exposure to harsh conditions were first primed, then covered with an almost four millimetre thick, elastic layer of acrylic resin and then with an anti-skid top coat to fight wear and tear.

Proven in the field
For over 55 years
On many million m²

A piece of cake to put down—the floor is fully cured and ready for action after only 2 hours. A perfect way to avoid stand-stills in your operations!
